Professional summary

Frontend Developer with 5+ years of experience in developing user-centric B2B HR SaaS platforms, specializing in Vue.js, React, and TypeScript. Demonstrates innovative problem-solving skills through the creation of role-based access control and interactive organizational charts, while enhancing team collaboration and code quality. Passionate about delivering streamlined HR solutions and improving user experiences.

Employment history

Frontend Developer

Gabia, Gwacheon-si, Gyeonggi-do, Republic of Korea — Nov 2020 - Jul 2025

Frontend Developer – HIWORKS HR Management System

Stack: Vue.js, React, Next.js, TypeScript, SCSS, RESTful API

- Participated in the frontend development of a B2B HR SaaS platform, delivering both **admin** and **end-user** (employee) features
- **Admin features**:
  - Role-based access control implementation for permission-based UI rendering
  - Developed document issuance functionality (certificates in Korean & English)
  - Built employee payroll management UI with custom salary configuration
  - Integrated e-contract services for managing digital employment agreements
  - Designed an interactive org chart UI to visualize team hierarchy
- **User-facing features**:
  - Built time tracking interface (clock-in/clock-out, status display)
  - Implemented request flows for leave, lateness, early leave, and off-site work
  - Developed support for remote/flexible work schedules with real-time tracking
  - Built vacation and annual leave application pages with auto leave balance calculation
  - Created user dashboards to view personal attendance history and stats
- Developed and maintained several modules using React and Next.js for improved performance and scalability

- **official company website introducing functions**
